Kithara Software, innovator for PC-based real-time, will be once again an exhibitor at this year's VISION in Stuttgart from November 8 – 10. At booth 1A68 in hall 1, visitors are granted an insight into the newest developments for the field of real-time vision technologies as well as their implementation into automation systems.

At the world's leading trade show for machine vision components and systems, Kithara Software will showcase software solutions for real-time image capture with GigE Vision and USB3 Vision, real-time image processing with HALCON and OpenCV as well as EtherCAT-based automation. Furthermore, the features of the recently released version 10 of the »RealTime Suite« will be presented.

A new addition will be the Storage Module for fast real-time data storing via solid-state drives, which are especially beneficial for vision systems with extreme amounts of data throughput. The Storage Module is therefore optimally suited for the reading and writing of data sets in connection with multi-camera systems and image-based hardware-in-the-loop applications.

“Machine vision is one of the fastest growing fields with demands for for “hard” real-time capabilities. This is why, in recent years, Kithara’s developments have increased their focus towards image technologies. Since then the VISION in Stuttgart has been one of the most important trade fair participations.”, Uwe Jesgarz, managing director of Kithara Software GmbH, explained.

The VISION, world’s leading trade fair for machine vision, is market place for component manufacturers but also platform for system providers and integrators. At the VISION, OEMs machine engineers and system houses get informed about newest innovations from the world of machine vision components whereas end users can meet a variety of system integrators.

About Kithara Software GmbH

Kithara Software is a specialist for real-time solutions, especially for the Windows® operating systems family. The real-time extension RealTime Suite is a comprehensive system library for hardware-dependent programming, communication, automation and image processing in real-time. The software is an easy-to-use and powerful technical basis for advanced applications in robotics, image processing, measurement and control engineering as well as automation. It is the key element in machine building, for testing rigs and other specialized applications. Kithara Software has representations in the USA as well as China and supports global companies in their innovative projects.
